## COMMENTS:

- Trisomy 13 risk at 9 – 14wks **1 in 3193**
- Trisomy 18 risk at 9 – 14wks **1 in 1143**
- Trisomy 21 risk at 9 – 14wks **1 in 446**
- IUP at about 12 weeks with appropriate fetal size. No major fetal anomaly were found in this first Trimester pregnancy fetal anatomical screening.  
The NT(nuchal translucency), NB(nasal bone) & MR(mandibular ratio) were evaluated and all the results are low risk, but this parameter need to be correlated with maternal age and maternal serum markers.

These calculations assume that the NT measurements are made using the same protocol as the Fetal Medicine Foundation.
